Summary of Treatment

Date Source Physician Description

<u>5/20/07</u>		<u>Date of injury</u>	
5/20/07	1-17	M. Howard	ER – complained of left wrist, arm pain. Fell from a ladder at work. No head injury. Severe wrist pain, probable fracture. Send for x-rays.
5/20/07	1-25	Fine	X-ray, left forearm – Colles-type fracture with comminution and intraarticular extension of the distal radius. There is deformation. X-ray, left shoulder – normal.
5/23/07	1-102	J. Howard	Admission – broken left wrist. Medications: Celebrex, Synthroid, Coumadin, Diazoc. Previous surgeries: rotator cuff repair.
5/24/07	3-9	Smith	Surgery – open reduction and internal reduction of left distal radius with dorsal Stryker plate.
5/30/07	4-33	Goldberg	Initial evaluation – wearing left circumferential wrist splint. Excellent motivation.
5/30/07	3-20	Smith	Dressing removed, incision looks fine. Sutures removed. Moving her fingers well. X-rays show wrist in good healing position. Fairly good control with wrist extensor. Needs to avoid overdoing it. Will go to therapy and be placed in a splint. Return in two weeks.
6/2/07	4-31	Goldberg	PT – no change. Rates pain level at 7 out of 10.
6/3/07	4-29	Goldberg	PT – did too much over the weekend, feels worse. Pain level 8.
